```
SQL> SELECT * FROM bowie_stuff2 WHERE id = 420;

2000 rows selected.

Execution Plan
----------------------------------------------------------
Plan hash value: 134336835

--------------------------------------------------------------------------
| Id  | Operation                    | Name          | Rows  | Bytes | Cost  |
--------------------------------------------------------------------------
|   0 | SELECT STATEMENT             |               |  2000 | 36000 |    18 |
|   1 |  TABLE ACCESS BY INDEX ROWID | BOWIE_STUFF2  |  2000 | 36000 |    18 |
|*  2 |   INDEX RANGE SCAN           | BOWIE_STUFF2_I |  2000 |       |     9 |
--------------------------------------------------------------------------

Predicate Information (identified by operation id):
---------------------------------------------------

   2 - access("ID"=420)

Note
-----
   - cpu costing is off (consider enabling it)

Statistics
----------------------------------------------------------
          0  recursive calls
          0  db block gets
         20  consistent gets
          0  physical reads
          0  redo size
      10501  bytes sent via SQL*Net to client
        396  bytes received via SQL*Net from client
          2  SQL*Net roundtrips to/from client
          0  sorts (memory)
          0  sorts (disk)
       2000  rows processed
