```
SQL> select * from bowie_stuff2 where id in (20, 30, 40, 50, 60);

10000 rows selected.

Execution Plan
----------------------------------------------------------
Plan hash value: 573616353

----------------------------------------------------------------
| Id  | Operation          | Name         | Rows  | Bytes | Cost  |
----------------------------------------------------------------
|   0 | SELECT STATEMENT   |              | 10000 |  175K |    65 |
|*  1 |  TABLE ACCESS FULL | BOWIE_STUFF2 | 10000 |  175K |    65 |
----------------------------------------------------------------

Predicate Information (identified by operation id):
---------------------------------------------------

   1 - filter("ID"=20 OR "ID"=30 OR "ID"=40 OR "ID"=50 OR "ID"=60)

Note
-----
   - cpu costing is off (consider enabling it)

Statistics
----------------------------------------------------------
          1  recursive calls
          0  db block gets
        664  consistent gets
          0  physical reads
          0  redo size
      50654  bytes sent via SQL*Net to client
        407  bytes received via SQL*Net from client
          3  SQL*Net roundtrips to/from client
          0  sorts (memory)
          0  sorts (disk)
      10000  rows processed
